

Experts for high-performance chemical and mineral specialties. Since 1894.

LEHVOSS
Group

Raw Material Solutions for Rubber

Product Portfolio

The rubber industry is undergoing change.

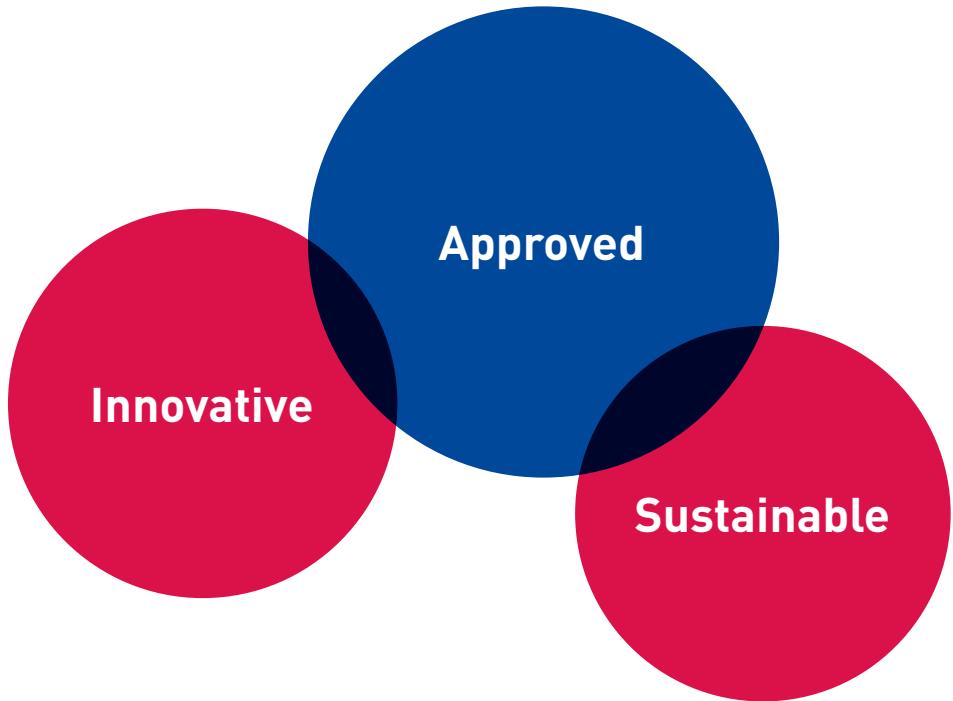

We have the appropriate raw material program for it.

Software

Sourcing | Customizing | Manufacturing

We provide you with the raw material solutions that fit your exact needs.

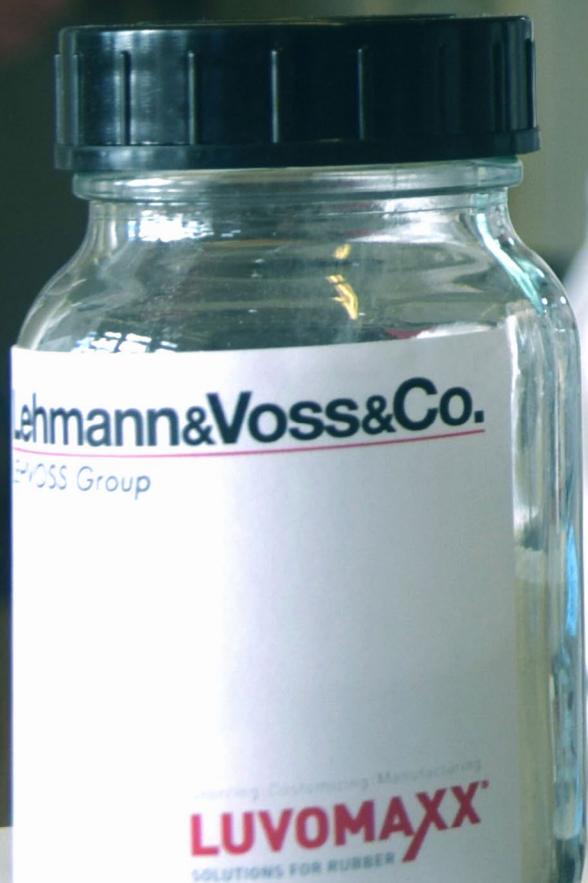

The LUVOMAXX® Group provides you with a high-end portfolio of chemical and mineral specialties at a consistently excellent quality level, based on raw materials that are tailor-made using our own formulas in our production facilities or from qualified partners. In addition to dry liquids and blowing agent pastes, our range also includes a variety of elastomer-bound preparations.

Constantly analysed - both in terms of material properties and qualities as well as application suitability. The aim, at all times, is to offer you the specific innovative, sustainable raw material solution you need to solve all technical and economic challenges in a highly efficient manner.

A blurred background image of a scientist wearing a white lab coat, a face mask, and safety glasses, focused on work at a lab bench.

**Worldwide Trading
Network**

**Excellent Analytical
Quality**

Worldwide procurement.

We procure only high-quality raw materials from predominantly exclusive partners from our powerful and efficient global trading network.

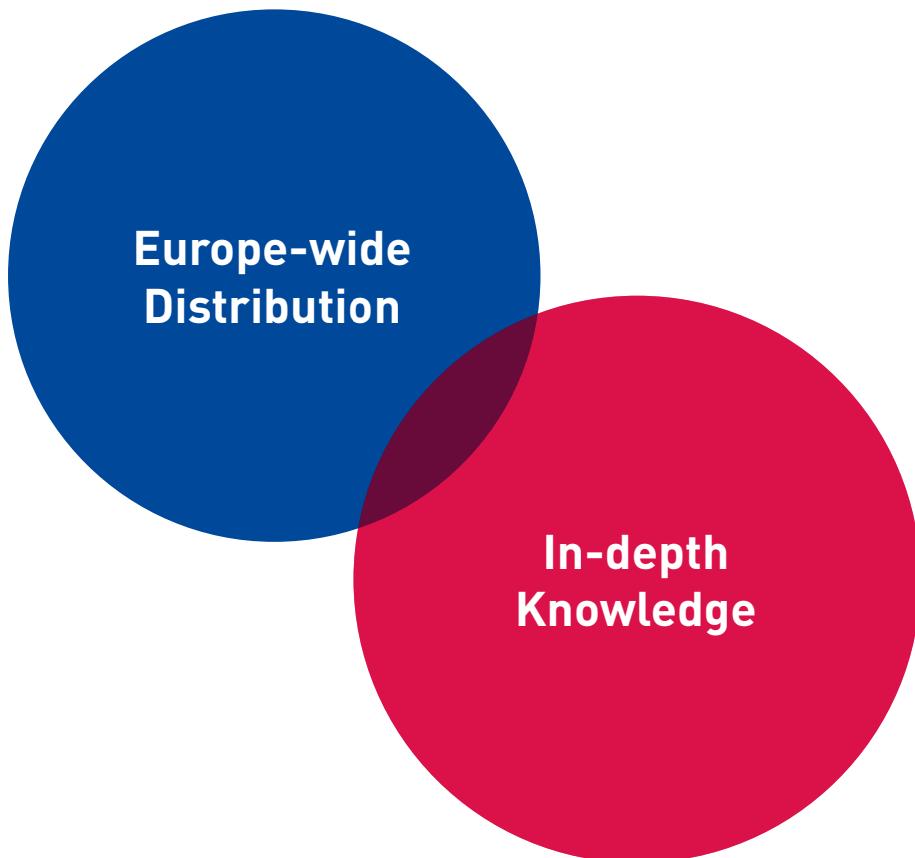

Excellent analysis.

We test the material properties and application suitability of all raw materials we distribute in our laboratory in Hamburg. The continuous analytical evaluation of "freshly received" merchandise is just as much of an established process as the quality testing of our own preparations or the individual testing of raw materials or material samples in consultation with our clients.

In order to ensure a highly detailed and excellent analysis quality, we use a broad spectrum of examinations.

This ranges from:

- the classical wet chemical analysis – within the scope of extraction, incineration or titration – through
- instrumental methods – rheology, infrared spectroscopy (DATR), thermal analysis (DSC, TGA, TMA), granulometry, colorimetric determination and optical microscopy – and
- special tests – carbon black analytics, blowing agent analysis (gas yield), fire behavior, electrical conductivity and density determination up to
- application-specific impressions, which we generate with dissolver, extruder, laboratory kneader, Mooney viscometer or ODR rheometer.

Europe-wide Distribution.

Together with our subsidiaries LEHVOSS France, LEHVOSS Italia and LEHVOSS UK, we provide a strong, close-knit sales network that offers you all the advantages of an internationally active, synchronised sales organisation directly on site.

In-depth Knowledge

Since the early days in 1894 as a “Hamburg trading house for chemical and mineral specialties”, extensive expertise has been the hallmark of today’s LEHVOSS group of companies and in particular of the LUVOMAXX®-Division. by extension.

This expertise is expressed through our products and services offered throughout Europe and distributed in the most critical markets by way of our own subsidiaries. These subsidiaries, in turn, are all characterised by their teams of predominantly local experts who a) are also very familiar with the business culture of their home countries and b) are consistently trained and steadily expanding.

An expertise that, today, is sustained by well over 600 employees worldwide. This also includes the ladies and gentlemen - your direct contacts on all questions relating to rubber processing.

1. Accelerators for Sulphur-Vulcanisation

| Product name | Product Appearance | | | | | Active Ingredient |
|------------------|--|---------------------------|--------------------|----------------------|---------|---|
| | Dry Liquid (DL) preparation or liquid form | Polymer-bound granules | Oil free powder | Oil coated powder | Pellets | |
| LUVOMAXX® AS 100 | • | | | | | Diisopropyl xanthogene polysulphide |
| LUVOMAXX® CBS | | • | | • | • | N-cyclohexyl-2-benzothiazole- sulfenamide |
| LUVOMAXX® CLD | | • | | | | Caprolactam disulphide |
| LUVOMAXX® DBU | • | | | | | Cyclic diamine |
| LUVOMAXX® DCBS | | | | • | • | N,N-dicyclohexyl-2-benzothiazole- sulfenamide |
| LUVOMAXX® DOTG | | | | • | • | Di-o-tolylguanidine |
| LUVOMAXX® DPG | | • | | • | • | Diphenylguanidine |
| LUVOMAXX® DPTT | | • | | • | • | Dipentamethylenethiuram hexasulphide |
| LUVOMAXX® ETU | | • | | • | • | N-N'- ethylene thiourea (imidazolidine-2-thione) |
| LUVOMAXX® HMT | | • | • | | | Hexamethylene tetramine |
| LUVOMAXX® MBT | | • | | • | • | 2-Mercaptobenzothiazole |
| LUVOMAXX® MBTS | | • | | • | • | Di(benzothiazol-2-yl)disulphide |
| LUVOMAXX® TBBS | | • | | • | • | N-tert butyl-2-benzothiazole- sulfenamide |
| LUVOMAXX® TBSI | | | | • | | N-tert-butyl-di (2-benzothiazole)-sulfenimide |
| LUVOMAXX® TDEC | | | | • | • | Tellurium diethyldithiocarbamate |
| LUVOMAXX® TBzTD | | • | | • | • | Tetrabenzylthiuram disulphide |
| LUVOMAXX® TETD | | | • | • | • | Tetraethylthiuram disulphide |
| LUVOMAXX® TIBTD | | | | • | • | Tetraisobutylthiuram disulphide |
| LUVOMAXX® TMTM | | • | | • | • | Tetramethylthiuram monosulphide |
| LUVOMAXX® ZBEC | | • | | • | • | Zinc dibenzylidithiocarbamate |
| LUVOMAXX® ZDBC | | | • | • | • | Zinc dibutylidithiocarbamate |
| LUVOMAXX® ZDEC | | | • | • | • | Zinc diethyldithiocarbamate |
| LUVOMAXX® ZDTP | • | • Upon request | | | | Zinc dialkyldithiophosphate |
| LUVOMAXX® ZMBT | | | • | • | • | Zinc salt of 2- mercaptobenzothiazole |

5. Blowing Agents

| Product name | Product Appearance | Active Ingredient | Colour (pure substance) |
|----------------------|--------------------|---|-------------------------|
| | Powder | | |
| Luvopor ABF/10 P | ● | Azodicarbonamide | yellow-orange |
| LUVOPOR® ABF/70 P-FF | | Azodicarbonamide | yellow-orange |
| LUVOPOR® OB Pulver | | 4,4'-Oxybis (benzene sulfonylhydrazide) | white |
| LUVOMAXX® OSH 3 | | 4,4'-Oxybis (benzene sulfonylhydrazide) | white |
| LUVOPOR® TSH | | Toluene sulfonylhydrazide | white |

Blowing agent - Specialty preparations

| Product name | Product Appearance | | | Preparation blend based on | Colour of preparation | Gas Yield of preparation [ml/g] |
|------------------------|--------------------|------------------------------------|------------------------|--|-----------------------|---------------------------------|
| | Powder mix | Oil coated paste to crumbly powder | Polymer bound granules | | | |
| LUVOPOR® AT 6100 | ● | | | Azodicarbonamide, activated by toluene sulfonylhydrazide | yellow | 280 |
| LUVOPOR® 9506 | ● | | | Azodicarbonamide; ZnO-activated | yellow | 165 |
| LUVOMAXX® AZ / K OC 80 | | ● | | Azodicarbonamide, activated by ZBS | yellow | 160 |
| LUVOPOR® 9326 | | ● | | Azodicarbonamide | yellow | 280 |
| LUVOPOR® 9382 | | ● | | Azodicarbonamide | yellow | 240 |
| LUVOPOR® AT 6180 | | ● | | Azodicarbonamide, activated by toluene sulfonylhydrazide | yellow | 170 |
| LUVOPOR® 9353 | | ● | | Modified azodicarbonamide, more coarse Azo | yellow | 210 |
| LUVOMAXX® AZ GR | | | ● upon request | Azodicarbonamide | yellow | 220 |
| LUVOPOR® 9259 (mod) | | ● | | Azodicarbonamide blended with 4,4'-Oxybis (benzene sulfonylhydrazide), activated | light yellow | 165 |
| LUVOPOR® OB Paste 80 % | | ● | | 4,4'-Oxybis (benzene sulfonylhydrazide) | white | 125 |
| LUVOMAXX® OSH OC 80 | | ● | | 4,4'-Oxybis (benzene sulfonylhydrazide) | white | 125 |
| LUVOMAXX® OB GR | | | ● | 4,4'-Oxybis (benzene sulfonylhydrazide) | white | 100 |
| LUVOPOR® TSH-Paste | | ● | | Toluene sulfonylhydrazide | white | 110 |

17. Rubber bonding agents

Producer: Parker LORD Corp.

| Product type | Product name | Product | Solvent |
|---------------------------------------|---------------------------|------------------------------|--|
| Primer and/or Elastomer bonding agent | PARLOCK® PM 05 | Viscous liquid | |
| Elastomer bonding agent | PARLOCK® PC 6012 | Viscous liquid | |
| Elastomer bonding agent | PARLOCK® PC 6016 | Viscous liquid | |
| Primer and/or Elastomer bonding agent | Chemosil® 211 | Gray liquid | MIBK, Xylene |
| Elastomer bonding agent | Chemosil® 225 | Black liquid | Xylene |
| Elastomer bonding agent | Chemosil® 350 | Brown liquid | Ethanol, Methoxy Butyl Acetate |
| Elastomer bonding agent | Chemosil® 511 | Clear colorless liquid | Ethanol |
| Elastomer bonding agent | Chemosil 597E | Clear yellow to brown liquid | Organic solvent system |
| Elastomer bonding agent | Chemosil® NL411 | Black liquid | Xylene, Solvent Naphtha, Diacetone Alcohol |
| Elastomer bonding agent | Chemosil® 6025 | Black liquid | Xylene |
| Elastomer bonding agent | Chemosil® X5960-22 | Blue liquid | Methyl Ethyl Ketone (MEK), Xylene |
| Elastomer bonding agent | Chemosil® X5130-22 | Clear liquid | Ethanol |

| Application field | Sales territory | | | | |
|--|-----------------|------|---|----|---|
| | EU | DACH | I | GB | F |
| Used with Parlock adhesive to bond a wide variety of vulcanized and unvulcanized rubber compounds to metal and other rigid substrates. | | | ● | | |
| Universal rubber-to-metal adhesive. Parlock PC 6012 can be optionally applied with Parlock PM05 primer. Parlock PC 6012 bonds different rubber compounds and elastomers (NR, IR, SBR, BR, NBR and IIR) and some plastics. The combination of Parlock PC 6012 with Parlock PM05 primer offers excellent adhesion values. | | | ● | | |
| Universal rubber-to-metal adhesive. Parlock PC 6016 can be optionally applied with Parlock PM05 primer. Parlock PC 6016 bonds different rubber compounds and elastomers (NR, IR, CR, SBR, BR, NBR, IIR, EPDM, ECO and CSM) and some plastics. The combination of Parlock PC 6016 with Parlock PM05 primer offers excellent adhesion values and is especially suitable for soft NR and NBR in TM- and IM- procedures. | | | ● | | |
| LORD Chemosil® 211 primer is a heat-activated bonding agent designed for use as a substrate primer under other Chemosil covercoat bonding agents, or as a one-coat bonding agent for bonding unvulcanized nitrile elastomer compounds. Can be used as a primer under a wide variety of Chemosil covercoat bonding agents. can be used as a one-coat bonding agent to bond unvulcanized nitrile elastomer compounds to metal and plastics." | | | | ● | |
| LORD Chemosil® 225 elastomer bonding agent is a covercoat material designed for use over Chemosil 211 primer. This bonding system will bond elastomer compounds based on natural rubber (NR), polyisoprene (IR), styrene-butadiene (SBR), polybutadiene (BR), polychloroprene (CR), nitrile (NBR) and butyl (IIR) elastomers to most metals, alloys and rigid plastic substrates. | | | | ● | |
| LORD Chemosil® 350 elastomer bonding agent is a one-coat material used to bond acrylate (ACM), nitrile (NBR) and epichlorohydrin (ECO) elastomer compounds to metal, alloys and other rigid substrates during the vulcanization process. | | | | ● | |
| LORD Chemosil® 511 elastomer bonding agent is a one-coat bonding agent used to bond silicone (MVQ) and fluorocarbon elastomers (FKM) to metal and a variety of other substrates during the vulcanization process. Can also be used as a primer in combination with Chemosil 6025 or Chemosil 231 G bonding agents to bond a wide range of elastomers to fabrics. | | | | ● | |
| LORD Chemosil® 597 E is a non-pigmented single coat bonding agent used for bonding castable polyether polyurethanes to metals and other rigid substrates. Chemosil 597 E will also bond several millable polyurethane elastomers during the vulcanization process. The solvent system for Chemosil 597 E does not contain chlorinated solvents. | | | | ● | |
| Chemosil NL 411-63E bonding agent can be used as a covercoat material over Chemosil 211 primer, or as a one-coat bonding agent for bonding a variety of elastomer compounds to metal and plastic substrates during the vulcanization process. Chemosil NL 411-63E bonding agent will bond elastomer compounds based on natural rubber (NR), polyisoprene (IR), styrene-butadiene (SBR), polybutadiene (BR), nitrile (NBR), polychloroprene (CR), butyl (IIR), and ethylene propylene (EPDM) to most metals, alloys and rigid plastic substrates. | | | | ● | |
| LORD Chemosil® 6025 elastomer bonding agent is a versatile, general purpose adhesive used to bond elastomers to rigid substrates, such as metals and alloys, as well as to other vulcanized elastomer materials. Chemosil 6025 bonding agent will bond elastomer compounds based on natural rubber (NR), polyisoprene (IR), styrene-butadiene (SBR), polychloroprene (CR), nitrile (NBR), butyl (IIR), chlorosulfonated polyethylene (CSM) and EPDM to most metals, alloys and rigid plastic substrates. Chemosil 6025 bonding agent is ideal for lining containers (hot water vulcanization). When bonding rigid substrates, Chemosil 6025 bonding agent should be used over Chemosil 211 primer. | | | | ● | |
| LORD Chemosil® X 5960-22 elastomer bonding agent is a one-coat material used to bond pourable polyurethane elastomers to metals and other rigid substrates during the vulcanization process. It is composed of a mixture of polymers and heat-reactive components in an organic solvent system. | | | | ● | |
| LORD Chemosil® X 5130-22 elastomer bonding agent is a clear one-coat bonding agent used to bond peroxide-cured fluorocarbon elastomers to metal and a variety of other rigid substrates during the vulcanization process. Chemosil X 5130-22 bonding agent is also suitable for bonding silicone and acrylate elastomers. It is composed of a mixture of polymers and heat-reactive components dissolved or dispersed in an organic solvent system. | | | | ● | |
