

Service

Qualification Printers for Print-Farm-Transfer

We offer interested customers the provision of 3D printers for the internal qualification of components. Together with our production partner 3D-Druck Matt, we ensure identical component quality when transferring initial samples from these printers to 3D-Matt's fast farm printers to produce large quantities at favorable conditions.

Our qualification printers are based on Bambu Lab H2S, which are perfectly adjusted to our **LUVOCOM 3F®** materials and filament quality. Dry boxes are included in the delivery.

If you are interested, please feel free to contact us directly:
